DETAILED ACTION

1. This action is responsive to the communication filed on June 8, 2007. Claims 1-45 are pending. At this time, claims 1-45 are still rejected.

Double Patenting

2. Claims 1-45 provisionally rejected on the ground of nonstatutory double patenting over claims 1-3 and 5-45 of copending Application No. 10/044,565. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows:

The two inventions claiming for:

- i. an application programming interface (API) for communication between an administration server and an authentication server connected via a data communication network, said administration server providing a service associated with a namespace to one or more users on the data communication network, said authentication server having a database associated therewith storing authentication information for authenticating the users of the namespace service, said administration server being responsive to an administrator for issuing at least one request to said authentication server, said request specifying at least one action to be performed in relation to the namespace;
- ii. A method for delegating at least one administrative task from a first system to a second system, said first and second systems connected via a data communication network, said second system providing a service associated with a namespace to one or more users on the data communication network.
- iii. One or more computer readable media having computer-executable instructions for performing the method above.
- iv. A computer readable medium having computer-executable components for delegating at least one administrative task from an authentication

system to at least one administration system, said authentication system and administration system connected via a data communication network, said administration system providing a service associated with a namespace to one or more users on the data communication network.

v. A system for authenticating at least one user of a namespace service

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Conclusion

3. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
